App Navigation — What's Inside

Four key sections covering the entire ERP-to-Fabric journey

1

Dashboard

KPIs, pipeline status
& ingestion summary

Live metrics

2

ERP Source Wizard

5-step wizard to connect
& deploy any ERP

5-step guided wizard

3

ERP Comparison

Compare table & field
schemas across platforms

Table + Field views

4

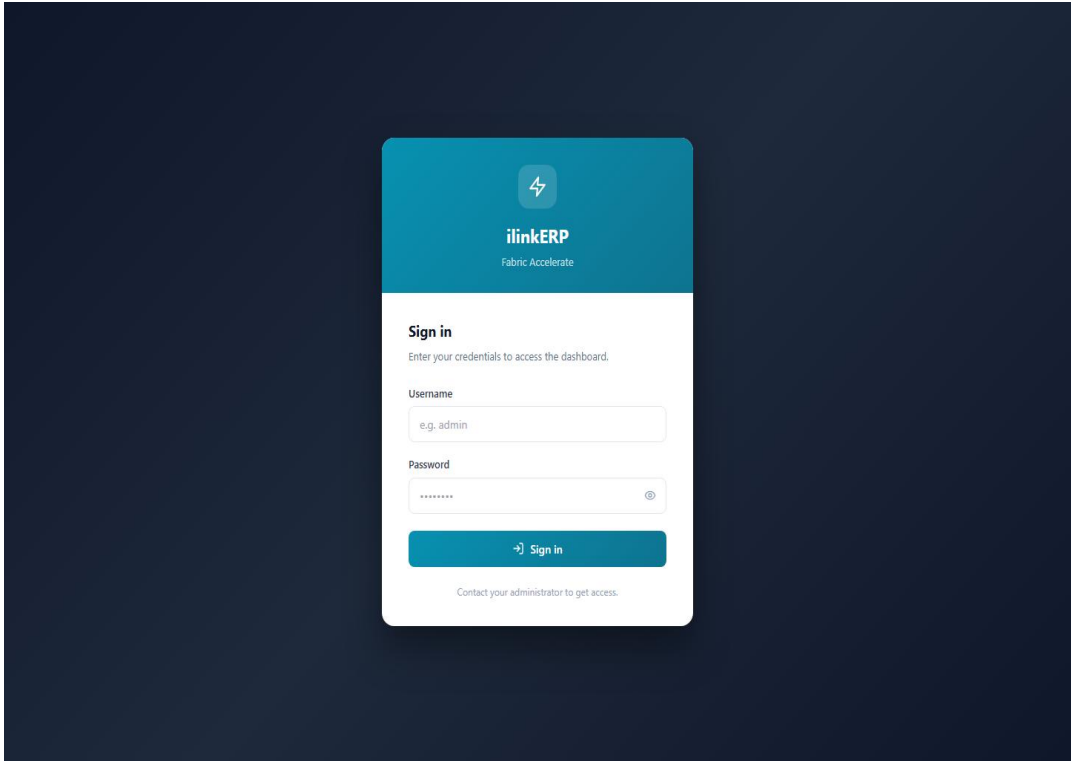
Settings

Fabric connections &
user management

2 tabs

Getting Started — Secure Login

JWT-based authentication protects your ERP data



Role-based Access

Admin and Viewer roles with separate permissions

JWT Security

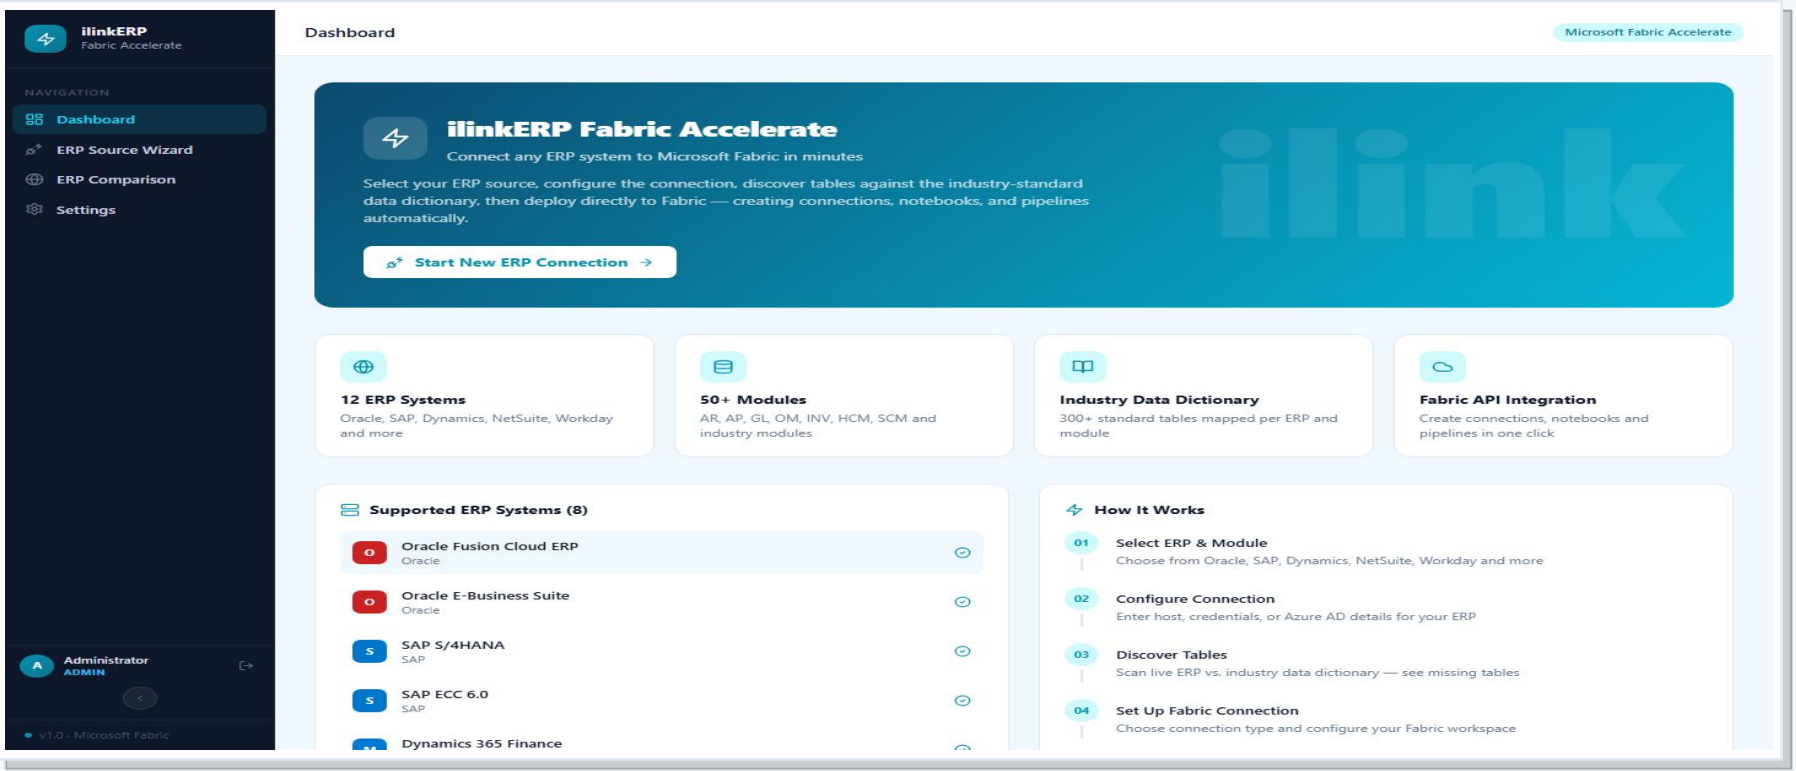
Tokens expire automatically — no session left open

Local Auth

No external identity provider needed; bcrypt password hashing

Dashboard — Your Starting Point

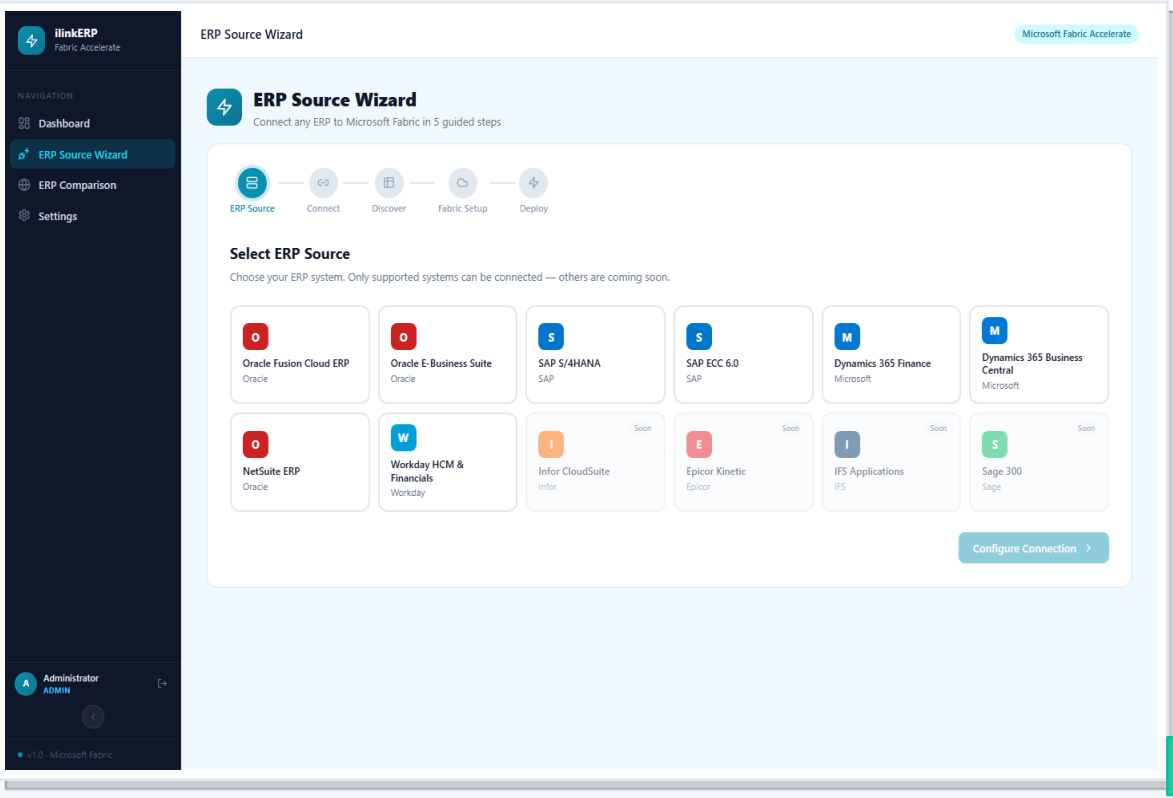
First page after login — shows ERP status, supported systems, and quick-start guide



After login you land here → KPI cards · Supported ERP list · How It Works guide · Start New ERP Connection button

ERP Source Wizard — Step 1: Select ERP

Choose your ERP platform and modules to begin the 5-step guided setup



1 **Select ERP**

2 Connect

3 Discover Tables

4 Fabric Setup

5 Deploy

Select ERP → select modules → click Configure Connection →

Wizard — Step 2: Configure Connection

Enter your ERP credentials — or skip to use pre-built industry table schemas

Step 2 of 5 — Configure Connection

Host / URL

e.g. erp.company.com

Port

1521

Database / SID

PROD

Username

erp_user

Password

••••••••

← Back

Skip — use standard tables

Discover Tables →

What to enter

Your ERP's database host, port, schema name, and credentials. These are used to scan the live ERP schema in Step 3.

Don't have credentials?

No problem. Use the Skip button to bypass connection setup and proceed with pre-built industry-standard table schemas for your ERP.

NEW — Skip Option

Click "Skip — use standard tables" to proceed without ERP credentials. The app uses the industry data dictionary for your chosen ERP and module.

Wizard — Steps 3 to 5: Discover, Setup & Deploy

From schema scan to live Delta tables in Microsoft Fabric

3 Discover Tables

- Scans live ERP schema via JDBC
- Matches against industry data dictionary
- Flags missing / extra tables
- You select which tables to ingest

›

4 Fabric Setup

- Enter OneLake storage account
- Set container & schema prefix
- Map ERP tables → Delta table names
- Configure write mode (overwrite/append)

›

5 Deploy Pipeline

- Creates Fabric notebooks (PySpark)
- Builds Synapse pipeline trigger
- Runs initial full data load
- Schedules recurring sync jobs

ERP Comparison — Field-Level Schema Mapping

Compare exact field names, table names, and data types across all 8 ERP platforms

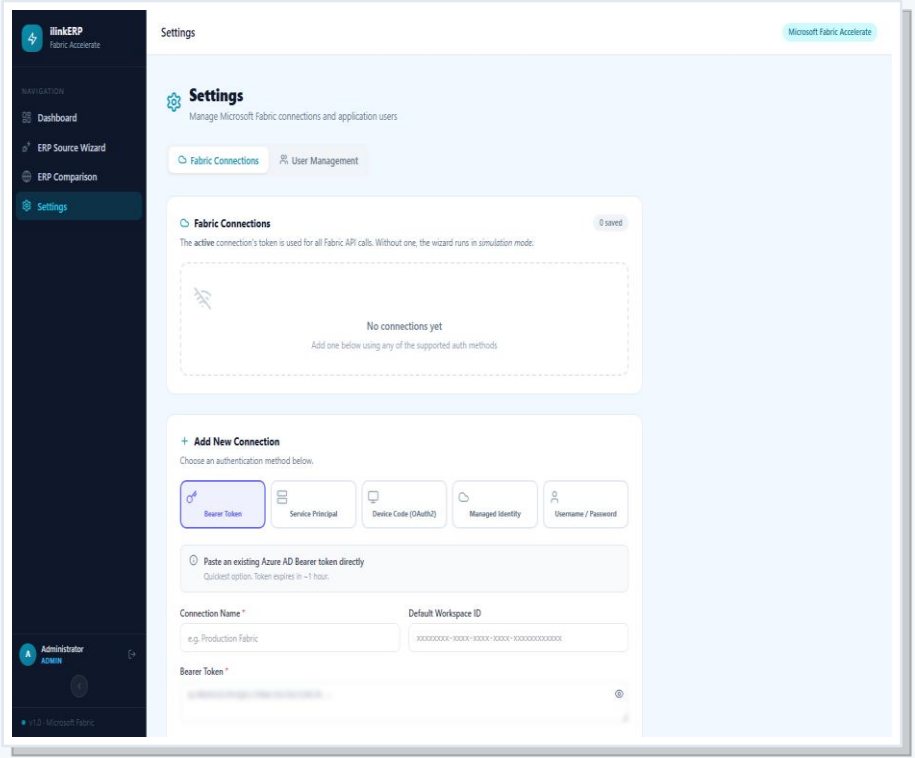
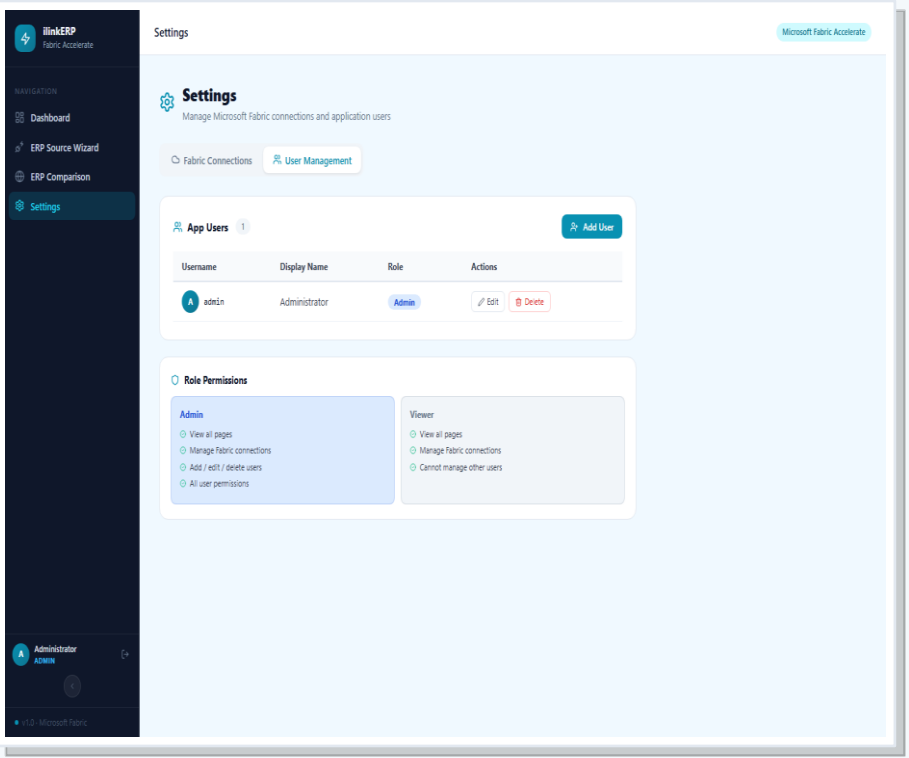
Table Comparison · Filter by module (GL, AP, AR, INV…) **Field Comparison** · See exact column names per ERP (shown above) **Download CSV / Excel**

Settings — Fabric Connections & User Management

Configure where data lands in Microsoft Fabric and who has access to the app



Fabric Connections — Bearer Token, Service Principal, OAuth2, Managed Identity



User Management — Admin & Viewer roles, add/edit/delete users

Complete ERP → Fabric Journey in One App

1. Login with role-based JWT auth (Admin / Viewer)
2. Dashboard — live pipeline status and supported ERP list
3. 5-step wizard — select ERP, connect (or skip), discover, configure Fabric, deploy
4. ERP Comparison — table & field mapping across 8 platforms, export to Excel
5. Settings — Fabric auth methods + user management
